

February 25, 2021

Transit transport is a transportation service that trading is carried out from one country to another without being subject to duty across the borders of a third country.

On November 13<sup>th</sup>, 2020, with the President of The Grand National Assembly of Turkey Prof. Dr. Mustafa ŞENTOP's attending the celebration of the dispatch of the first export-loaded train, we offered a solution to the problem about Turkish trucks and export cargoes' waiting at the borders. As here today, with the road which the President of Parliament's opened and the connection between Asyaport and Tekirdag Medlog Railway Terminal, we offer quick and eco-friendly way by moving Europe's transit cargoes which are coming to Turkey by train from Tekirdag.

The cargoes, which were previously transported to the port of Bourgas by sea through the Bosphorus, will today be delivered to the recipient by railway, as "door delivery", less than 10 days.

We hope that the transportation of the first transit cargo via railway terminal -which Medlog company has built for 3 months and will cost 50,000,000 Turkish liras when it is completed- and railway line -which is added to the powerful transport infrastructure of Tekirdag- from Asyaport to Europe will be beneficial to our country.
